

Achievements with the EUROBALL spectrometer

Scientific and Technical Activity Report

1997-2003

W. Korten and S. Lunardi (Eds.)

on behalf of the

EUROBALL Coordination Committee

October 2003

Contents

Executive summary 1

1. Nuclei at very elongated shapes

1.1.	Superdeformation: a brief survey.....	7
1.2.	New results related to superdeformed rotational bands	9
1.3.	Octupole softness and vibrations in superdeformed nuclei.....	12
1.4.	Magnetic properties in the superdeformed minimum	14
1.5.	Structure of superdeformed bands in $^{131,132}\text{Ce}$	15
1.6.	Search for Hyperdeformation.....	16

2. Triaxial nuclei

2.1.	Introduction.....	19
2.2.	General properties of strongly deformed triaxial nuclei	21
2.3.	New results on TSD bands in the Lu-Hf region.....	22
2.4.	The wobbling mode and the first and second phonon excitation.....	26
2.5.	New Results on chirality in nuclei	28
2.6.	Conclusions and perspectives	29

3. Population and decay from superdeformed states

3.1.	Introduction.....	31
3.2.	Population of superdeformed states	31
3.3.	Decay from superdeformed states.....	34
3.4.	Conclusion	40

4. Rotational motion in thermally excited nuclei

4.1.	Introduction.....	41
4.2.	Mass dependence of rotational damping.....	42
4.3.	Superdeformation at finite temperature.....	44
4.4.	Role of E1 feeding in the population of the superdeformed states	48
4.5.	The double giant resonance in fusion-evaporation reactions	51
4.6.	Future Perspectives	51

5. Pairing correlations and band termination at the highest spins

5.1.	Introduction.....	53
5.2.	High spin spectroscopy	53
5.3.	Termination of rotational bands	54
5.4.	Summary	57

6. Symmetries in medium-light nuclei: at and beyond the $N = Z$ line

6.1.	Introduction.....	59
6.2.	Isospin symmetry breaking	60
6.3.	Isospin symmetry breaking studies with EUROBALL	62
6.4.	Conclusions and perspectives	71

7. Studies of $N \sim Z$ nuclei beyond ^{56}Ni

7.1.	Introduction.....	73
7.2.	Exotic decays	74
7.3.	The mass $A \sim 70 - 80$ region	76
7.4.	Approaching ^{100}Sn	78
7.5.	Perspectives.....	81

8. Nuclei on the neutron-rich side of stability

8.1.	Introduction.....	83
8.2.	Gamma rays from fission fragments	83
8.3.	Identification of new excited states in fission products	84
8.4.	Angular correlations, magnetic moments and spin alignment properties	87
8.5.	Lifetime measurements in fission fragments	89
8.6.	Gamma spectroscopy with deep inelastic heavy-ion reactions	91

9. Magnetic rotation

9.1.	Introduction.....	95
9.2.	Investigation of magnetic rotation with EUROBALL.....	97
9.3.	Summary and outlook	102

10. The technical merits of Euroball

10.1.	Introduction.....	103
10.2.	Large volume Germanium detectors.....	105
10.3.	Composite Germanium detectors.....	106
10.4.	Array design.....	109
10.5.	Segmented Germanium detectors	109
10.6.	Electronics and data acquisition.....	110
10.7.	EUROBALL IV and the inner BGO ball	111
10.8.	Gamma-ray tracking	112

11. Additional detectors for EUROBALL

11.1.	DIAMANT-III: the upgraded 4π light charged-particle detector array	113
11.2.	The EUCLIDES array	116
11.3.	The HECTOR array.....	118
11.4.	The Internal Conversion Electron Mini-Orange Spectrometer (ICEMOS)	120
11.5.	The EUROBALL Neutron Wall detector	123
11.6.	A Plunger apparatus for EUROBALL.....	126
11.7.	The Recoil Filter Detector for EUROBALL	128
11.8.	The SAPhIR detector	133
11.9.	The BRS Binary Reaction Trigger Spectrometer for EUROBALL IV	135

Annex: EUROBALL experiments and publications

A)	Scientific results in refereed journals.....	141
B)	Technical developments.....	151
C)	PhD Theses.....	152
D)	Invited Talks at International Conferences and Workshops	155
E)	EUROBALL experiments.....	159
