

# Contents

<b>Executive summary</b>	<b>1</b>
<b>1. Nuclei at very elongated shapes</b>	<b>14</b>
1.1. Superdeformation: a brief survey	14
1.2. New results related to superdeformed rotational bands	17
1.3. Octupole softness and vibrations in superdeformed nuclei	21
1.4. Magnetic properties in the superdeformed minimum	25
1.5. Structure of superdeformed bands in $^{131,132}\text{Ce}$	26
1.6. Search for Hyperdeformation	27
<b>2. Triaxial nuclei</b>	<b>31</b>
2.1. Introduction	31
2.2. General properties of strongly deformed triaxial nuclei	34
2.3. New results on TSD bands in the Lu-Hf region	37
2.4. The wobbling mode and the first and second phonon excitation	42
2.5. New Results on chirality in nuclei	46
2.6. Conclusions and perspectives	49
<b>3. Population and decay from superdeformed states</b>	<b>51</b>
3.1. Introduction	51
3.2. Population of superdeformed states	52
3.3. Decay from superdeformed states	57
3.4. Conclusion	65

<b>4.</b>	<b>Rotational motion in thermally excited nuclei</b>	<b>67</b>
4.1.	Introduction	67
4.2.	Mass dependence of rotational damping	70
4.3.	Superdeformation at finite temperature	72
4.4.	Role of E1 feeding in the population of the superdeformed states	79
4.5.	The double giant resonance in fusion-evaporation reactions	82
4.6.	Future Perspectives	83
<b>5.</b>	<b>Pairing correlations and band termination at the highest spins</b>	<b>86</b>
5.1.	Introduction	86
5.2.	High spin spectroscopy	87
5.3.	Termination of rotational bands	88
5.4.	Summary	92
<b>6.</b>	<b>Symmetries in medium-light nuclei: at and beyond the <math>N=Z</math> line</b>	<b>95</b>
6.1.	Introduction	95
6.2.	Isospin symmetry breaking	97
6.3.	Isospin symmetry breaking studies with EUROBALL	101
6.4.	Conclusions and perspectives	115
<b>7.</b>	<b>Studies of <math>N \sim Z</math> nuclei beyond <math>^{56}\text{Ni}</math></b>	<b>116</b>
7.1.	Introduction	117
7.2.	Exotic decays	119
7.3.	The mass $A \sim 70 - 80$ region	122
7.4.	Approaching $^{100}\text{Sn}$	126
7.5.	Perspectives	130

<b>8. Nuclei on the neutron-rich side of stability</b>	<b>132</b>
8.1. Introduction	132
8.2. Gamma rays from fission fragments	134
8.3. Identification of new excited states in fission products	135
8.4. Angular correlations, magnetic moments and spin alignment properties	141
8.5. Lifetime measurements in fission fragments	145
8.6. Gamma spectroscopy with deep inelastic heavy-ion reactions	148
<b>9. Magnetic rotation</b>	<b>152</b>
9.1. Introduction	152
9.2. Investigation of magnetic rotation with EUROBALL	155
9.3. Summary and outlook	162
<b>10. The technical merits of Euroball</b>	<b>163</b>
10.1. Introduction	164
10.2. Large volume Germanium detectors	167
10.3. Composite Germanium detectors	168
10.4. Array design	173
10.5. Segmented Germanium detectors	174
10.6. Electronics and data acquisition	175
10.7. EUROBALL IV and the inner BGO ball	177
10.8. Gamma-ray tracking	179

<b>11. Additional detectors for EUROBALL</b>	<b>180</b>
11.1. DIAMANT-III: the upgraded $4\pi$ light charged-particle detector array	180
11.2. The EUCLIDES array	184
11.3. The HECTOR array	187
11.4. The Internal Conversion Electron Mini-Orange Spectrometer (ICEMOS)	190
11.5. The EUROBALL Neutron Wall detector	195
11.6. A Plunger apparatus for EUROBALL	200
11.7. The Recoil Filter Detector for EUROBALL	205
11.8. The SAPHIR detector	210
11.9. The BRS Binary Reaction Trigger Spectrometer for EUROBALL IV	213
<b>Annex: EUROBALL experiments and publications</b>	<b>219</b>
A) Scientific results in refereed journals	219
B) Technical developments	233
C) PhD Theses	234
D) Invited Talks at International Conferences and Workshops	239
E) EUROBALL experiments	245
